

DMKEY

METALS: IMPORTANT NOTE

Although our selection of metals is very wide and our products can be customized on our clients preferences, there are some important aspects that must be considered before proposing an alternative finish instead of the standard one.

The metal parts of our product can be divided in 4 categories, depending on the kind of metal used.

A - CAST BRASS (SMOOTH OR HAMMERED)

The products made with this valuable material are manufactured through the sand casting process. **For the nature of this method, a highly handcrafted process is involved to achieve the final finish. Therefore, slightly differences on the surface and the color from one item to the other must be considered as part of the uniqueness and the beauty of the product itself.**

Products made in Cast Brass are provided (as standard) in hammered antique bronze finish (CASTBAM). The finish sample is also available.

Products made with this valuable and artistic material are:

- **Bouquet Bois** side table
- **Carol** floor lamp with tray
- **Don Diego** side table
- **Tosca** floor lamp
- **Elisabeth** console (available also in Cast Aluminum, instead of Cast Brass)
- **Chanel** casegood
- The optional top inset of the casegood **Philippe**
- The optional top inset of the coffee/side table **Alibaba**

Upon request and with an extra cost, the products in Cast Brass can be provided in a similar color of the following finishes:

- Hammered Black Nickel (NNM)
- Hammered Matte Nickel (NSM)
- Hammered Antique Brass (OAM)

Please note that, due to the handmade nature of the finishing process, colors will not always be 100% like the sample.

B - CAST ALUMINUM

Products made with this light material are manufactured through the sand casting process. **For the nature of this method, a highly handcrafted process is involved to achieve the final finish.** Therefore, **slight differences on the surface and the color from one item to the other must be considered as part of the uniqueness and the beauty of the product itself.**

Products made in Cast Aluminum are provided in the following finishes:

- AO | Aluminum gold finish (JAFAAR)
- RB | Copper batista
- SB | Silver Batista
- BN | Black Batista

Product manufactured in cast aluminum are:

- **Batista** side table
- **Darius** coffee table
- **Elisabeth** console (available also in Cast brass, CASTBAM finishing, instead of aluminum)
- **Jaafar** coffee table
- **Mina** table lamp
- **Thomas** dining table (leg)

C - COPPER

This precious material is used as thin sheets applied on a solid wood structure. The final finish is a black patina (wax) applied by hand. **A very subtle finish that can vary with use.**

- PN | black patina

Product manufactured in copper are:

- **Copper 1** side table
- **Copper 2** coffee table
- **Stewart** console (available also in steel, powder coated finishing, instead of copper)

D - STEEL

Steel - GALVANIC CORROSION

Products made with this specific process of finishing are literally submerged in a liquid/acid to obtain a chemical reaction, which confers the final coloring. For the nature of this process, some technical limits occur, due to the dimension of the galvanic tubs. Items that can be finished with this process must respect certain sizes. **For this reason, if in the pricelist page of a product, none of the galvanic finishes listed here below are indicated, that means that the item (because its size/shape) is not suitable for this kind of finishing.**

The galvanized steel can come in different finishing colors. Upon request and, in some cases, with an extra cost, the standard finish proposed in the pricelist can be changed with one of the others here below:

Matte

BA | Ancient Bronze

NNO | Matte Black Nickel

OA | Antique Brass

Polish

NNL | Polished Black Nickel

CR | Chrome

Hammered finish (**ADDITIONAL PROCESS - hand-made, to give a textured effect to the surface – it must be always verified with Bellavista Customer Service the feasibility of this process on those items where it is not specifically indicated in the pricelist page**)

BAM | Hammered Antique Bronze

NNM | Hammered Black Nickel

NSM | Hammered Matte Nickel

OAM | Hammered Antique Brass

Steel - POWDER COATED VARNISH

Powder coating is the process of applying a dry powdered paint compound made of pigments, specialized resins and fillers that melt and fuse together during the curing process to form a painted finish. Since there are no size/shape limits, this kind of finish can be applied to each part made in steel. The color range proposed is:

VC | Champagne finish

VBRO | bronze finish

VBRA | brandy finish

DU | Dull champagne

Products that can be done exclusively in powder coated varnish are:

- **Bonaparte** coffee table
- **Pesanti Trasparenze** ceiling mounted lattice
- **Retro** console
- **Stewart** console (available also in copper, PN finishing, instead of steel)
